Spring Boot

Java Introduction

Nguyễn Nghiê

- ☐ INTERCEPTOR INTRODUCTION
- ☐ ACCESSING LOGGER
- ☐ PREPARING DATA FOR LAYOUT
- ☐ WATCHING LANGUAGE CHANGING

What is Thymeleaf?

REVIEW LOCALECHANGEINTERCEPTOR

@Configuration

public class MessageConfig implements **WebMvcConfigurer** {

@Override

public void **addInterceptors**(InterceptorRegistry registry) {

LocaleChangeInterceptor **localeChange** = new LocaleChangeInterceptor();

localeChange.setParamName("lang");

registry.addInterceptor(**localeChange**)

.**addPathPatterns**("/**")

.**excludePathPatterns**("/admin/**");

}

}

Xem xét tất cả các url ngoại trừ các url bắt đầu bởi /admin/

BUILDING AND CONFIGURING INTERCEPTORS

@Configuration

```
public class InterceptorConfig implements WebMvcConfigurer {  
    @Autowired  
    MyInterceptor myInterceptor;  
    @Override  
    public void addInterceptors(InterceptorRegistry registry) {  
        registry.addInterceptor(myInterceptor)  
            .addPathPatterns(...)  
            .excludePathPatterns(...);  
    }  
}
```

2

@Service

```
public class MyInterceptor implements HandlerInterceptor {  
    @Override  
    public boolean preHandle(...) throws Exception {...}  
    @Override  
    public void postHandle(...) throws Exception {...}  
    @Override  
    public void afterCompletion(...) throws Exception {...}  
}
```

1

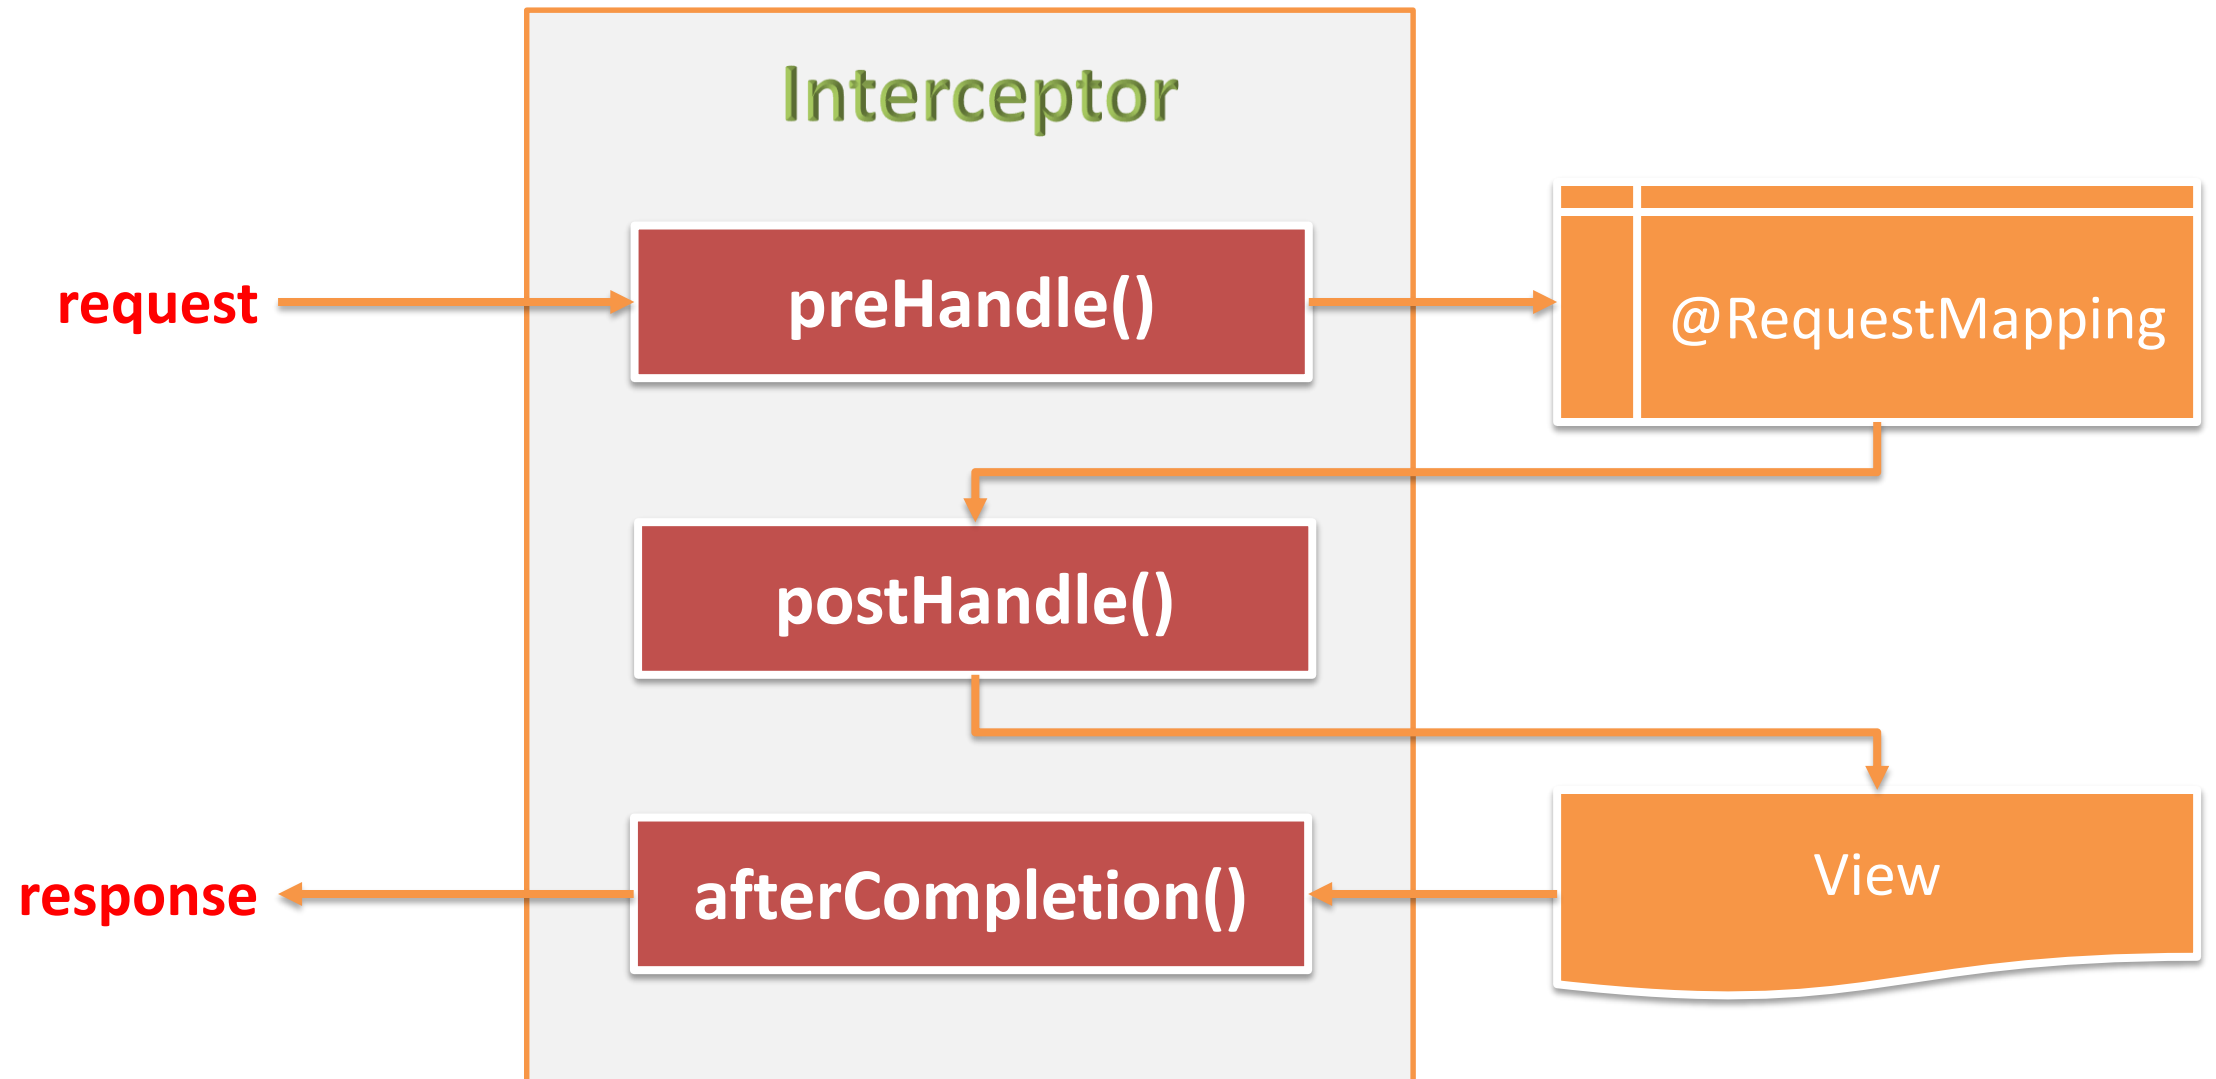

@Service

```
public class MyInterceptor implements HandlerInterceptor {  
    @Override // chạy trước khi đến action method  
    public boolean preHandle(HttpServletRequest request, HttpServletResponse response, Object  
        handler) throws Exception {  
        return true; // false: không chuyển tiếp đến action method  
    }  
  
    @Override // chạy sau khi kết thúc action method  
    public void postHandle(HttpServletRequest request, HttpServletResponse response, Object  
        handler, ModelAndView modelAndView) throws Exception {...}  
  
    @Override // chạy sau khi hoàn thành các công việc của view  
    public void afterCompletion(HttpServletRequest request, HttpServletResponse response, Object  
        handler, Exception ex) throws Exception {...}  
}
```

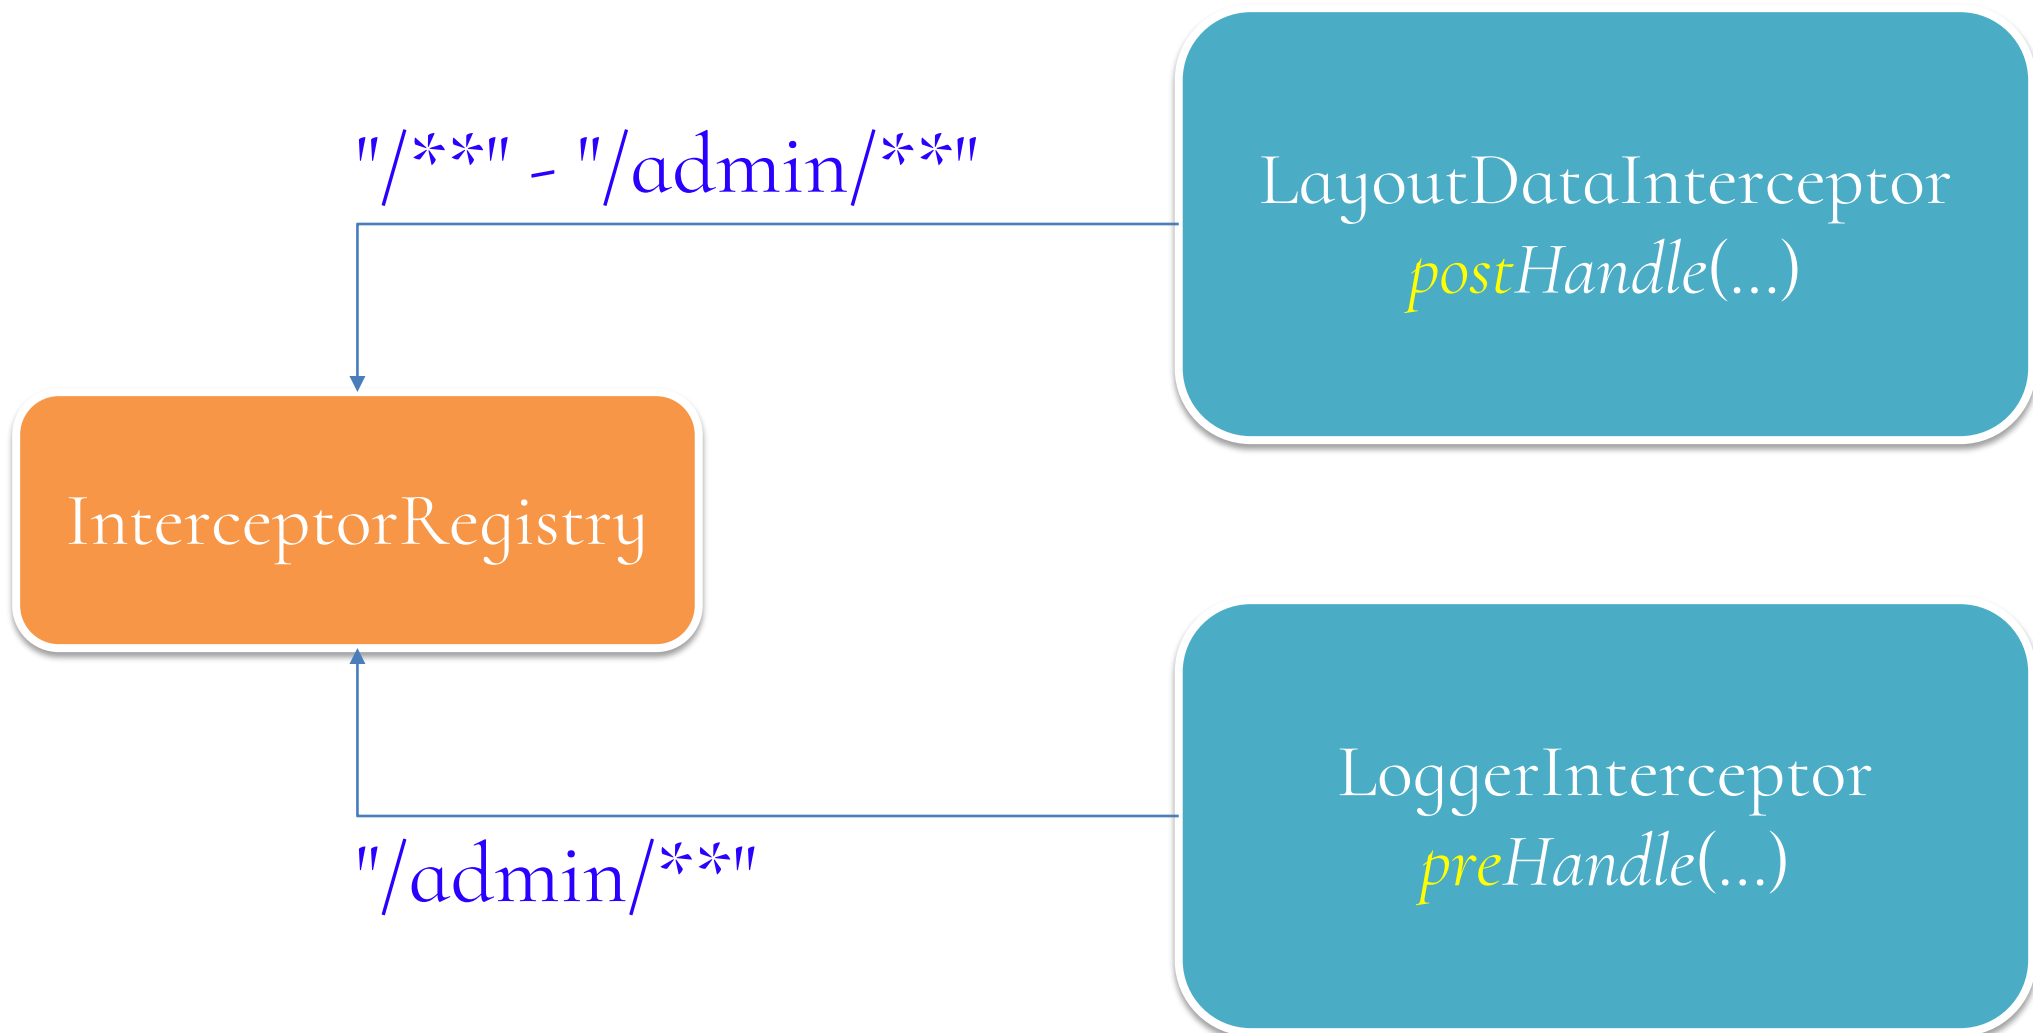

INTERCEPTOR HANDLING FLOW

ỨNG DỤNG INTERCEPTOR

@Service

public class LayoutDataInterceptor *implements* HandlerInterceptor{

@Autowired

CategoryDAO *dao*;

@Override

public void **post**Handle(HttpServletRequest request, HttpServletResponse response, Object handler, ModelAndView modelAndView) *throws* Exception {
 modelAndView.addObject("cates", *dao*.findAll());

}

}

@Service

public class LoggerInterceptor *implements* HandlerInterceptor{

@Override

public boolean **pre**Handle(HttpServletRequest request, HttpServletResponse response, Object handler) *throws* Exception {

 System.*out*.println(request.getRequestURI());

return true;

}

}

@Configuration

public class InterceptorConfig *implements* WebMvcConfigurer{

@Autowired

LayoutDataInterceptor *dataInterceptor*;

@Autowired

LoggerInterceptor *loggerInterceptor*;

@Override

public void addInterceptors(InterceptorRegistry registry) {

 registry.addInterceptor(*dataInterceptor*)

 .addPathPatterns("/**")

 .excludePathPatterns("/admin/**");

 registry.addInterceptor(*loggerInterceptor*)

 .addPathPatterns("/admin/**");

}

}

INTERCEPTOR

- ✓ INTERCEPTOR
- ✓ LOGGER
- ✓ DATA FOR LAYOUT
- ✓ LOCALE CHANGING

Thank
you
